

Burro's Tail/Jelly Bean/Donkey Tail/Sedum Care Instructions

*Careful moving as the thick succulent jelly bean like leaves fall off quite easily. Trailing succulent vine.

LIGHT: Prefer DIRECT SUNSHINE or VERY BRIGHT FILTERED LIGHT for optimum growth. Plant likes warm south windows. If the lighting is too low, the plant stems will elongate the new growth and the growth will be small.

WATER: Water thoroughly when moderately dry. Succulents do not require heavy watering. They do depend on light intensity and temperature. During the summer, they will require more light than in the winter.

TEMPERATURE: Normal indoor temperatures. Humidity is not crucial.

FERTILIZER: Fertilize monthly with a balanced liquid fertilizer when actively growing. Fertilize quarterly when inactive.
